

Aim: To create a vm ware application with your name

Procedure:

\* At first we should create vm ware workstation.

\* Then open it it shows options

\* click "Home" button

\* Directly shows some options they are

\* Create a new vm ware

\* It ask choose the virtual machine hardware compatibility choose it.

\* It shows guest operating system installation click next

\* We have to select type of OS  
Microsoft windows

On that screen there are many attributes like name, address, Email number etc.

According to your web app you can select and drag them into screen.

Result:

Thus the vm ware application with your name is executed successfully.
